

# ESCAPE TO PARADISE

BY K-WALL POURED WALLS INC.

St. John, U.S. Virgin Islands

Single-Family Custom Home

2,400 sq. ft.

*When building a home in St. John, getting materials and local labor is the biggest challenge, as well as waiting 5 to 10 days for concrete deliveries. Homes are built either up hill or down hill into rock, maximizing the lots. People building on St. John choose concrete because they want their homes to be still standing after hurricane season and also because termites are a large problem in the area. The weather in St. John is beautiful year-round, making working conditions pleasant even in the winter season. Building on an island is also like living on one—there are risks, but so many gains. We gained the knowledge and pride of delivering our customer a beautiful, safe and secure concrete home.*
