COMING SOON

WE'RE WORKING ON A SECOND JOB
IN ST. JOHN, VIRGIN ISLANDS THAT
2,800 SQ. FT. WITH 30'- TALL WALLS.
WE PLAN TO BUILT AT LEAST ONE
CONCRETE HOME A YEAR IN ST. JOHN.

This homeowner owned a concrete ready-mixed concrete company. He knew the value of concrete and knew he wanted a concrete home because it's energy efficient, meets green building standards, and would be an Energy Star home. The home is 2/3rds concrete—basement and first floor—while the second story is wood. The on-the-water site was challenging, so we experimented using with the E-MAXX system. The home has 4' footings, 10' basement and 10' first floor walls. This was a huge learning experience that went very well.

Rich Kubica, K-Wall Poured Walls, Inc.
